Synthoester TH 2532

dehydrate-group-containing polyester resin

Synthoester TH 2532 is a dehydrase-group-containing polyester resin for scratch
resistant and self-healing 1 pack and 2 pack top and one-layer coatings.
It stands out with very good adhesion to metal, wood, glass and plastics as well as
high chemical and weather resistance.

FIELD OF APPLICATION
Synthoester TH 2532 can be crosslinked with
polyisocyanates for high performance, air- and
forced-drying 2 pack top-coats with superb
mechanical properties, such as good flow,
scratch resistance, high elasticity, self healing,
water repelling and surface hardness.
Furthermore another characteristic are the
outstanding chemical and weather resistances,
high gloss and color retention.
It can be combined with nearly all
hydroxyfunctional acrylic resins.
This makes it a good choice for industrial
catings, in the automotive industry, for trains,
plastics and foils, wood, pigment pastes and
many more. We view the universally applicable
polyester resin as a perfect addition to our
portfolio.

HIGHLIGHTS
- universally applicable
- for scratch resistant and self-healing coatings
- outstanding mechanical properties
- high gloss and gloss retention
- good weather and chemical resistance
- excellent adhesion on wood, metal, glass and
  plastic
- high elasticity
- compatible with hydroxyfunctional acrylic resins
- low inherent color and good color stability
- good pigment uptake
